AttachmentU.S.S.R.ECONOMICBeketovka Steam Power Plant

1. Attached as Appendix A is a plan of the location of the Beketovka steam power plant near STALINGRAD, and at Appendix B a plan of the plant lay-out.

2. [redacted] it was originally built 50X1-HUM  
about 1925 under the supervision of German engineers. From the outside, the building is seen to have five smoke stacks. There are also about 10 cooling towers enclosed in a wooden structure.

3. The plant is equipped with ten transformers from which transmission lines carry current at 10,000, 3,000 and 100,000 volts. The turbines function by day and by night.

4. [redacted] daily coal 50X1-HUM  
consumption is 3 trainloads, consisting of five 60-ton trucks each, i.e., 900 tons.

5. There are about 500 men employed at the plant and security is in charge of army units.

6. Every year for about two weeks prior to the November, January and May holidays, the power supply is cut from this power station during the day to all but military industries, in order to avoid the wastage of energy which would otherwise take place during the festivities.
